## BlueCLINO

# NEW

The BlueCLINO is based on the well proven CLINO2000. It has the following interesting features:

- Instead of 45°, it now has a standard measuring range of +/- 60°, while keeping the same accuracy in the range of -45° to +45°
- The prominent feature is of course the very well readable and large colour display!
  - Various colour profiles can be chosen.
  - Various display methods like bar graphs or spirit levels can be chosen.
- Besides the well proven cast iron housing, it is also offered with an option of a housing made in hard anodised aluminium.
- Another very interesting new feature is the optional wireless transmission using Bluetooth technology.
- Furthermore there is the option to place a third measuring base on the right side of the instrument.
- A completely new feature is the possibility to adjust the instrument to the local earth gravity. You can enter the local earth gravity value and therewith eliminate this potential error in order to utilise the full accuracy of the instrument. For example:
 

Auckland	9.799 m/s <sup>2</sup>
Wellington	9.803 m/s <sup>2</sup>

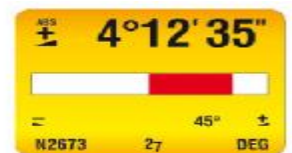

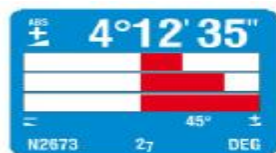

BlueCLINO with cast iron housing
